Appl. No. 10/759,505  
Amdt dated April 26, 2007  
Reply to Office Action of October 30, 2006  
Att. Docket No.: 1279-400C1

Filing date: January 16, 2004  
Applicant Name: Bazan et al.  
Examiner: Camie S. Thompson  
Art Unit: 1774

### AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

#### Listing of Claims:

Claim 1 (canceled)

Claims 2 and 3 (canceled)

Claim 4 (previously presented) A binaphthyl compound of the formula:

wherein each  $Ar^1$  and  $Ar^2$  is independently a substituted or non-substituted polycyclic aromatic hydrocarbon or a substituted or non-substituted aromatic heterocycle, each  $X^1$  and  $X^2$  is independently a substituted or non-substituted aromatic hydrocarbon, each  $n^1$  and  $n^2$  is independently 0 or 1, each  $R^1$  and  $R^2$  is independently a hydroxyl group, a substituted or non-substituted alkyl group, or a substituted or non-substituted alkoxy group, wherein  $R^1$  and  $R^2$  can be bound to each other to form a ring structure wherein the ring structure can have substituent groups, and wherein the compound's binaphthyl framework can be independently substituted by a halogen, a hydroxyl group, or a substituted or non-substituted alkyl, alkenyl, alkoxy or alkoxycarbonyl group at any position except those occupied by  $(X^1)n^1 Ar^1$ ,  $(X^2)n^2 Ar^2$ ,  $R^1$  and  $R^2$ .

Claim 5 (original) The binaphthyl compound of claim 4 wherein each  $R^1$  and  $R^2$  is an alkoxy group.

Claims 6 - 11 (canceled)

Claim 12 (original) An organic light emitting device comprising an anode and a cathode, and an emissive layer between the anode and cathode, the device including a layer between the emissive layer and the cathode comprising the binaphthyl compound of claim 4.

Claim 13 (previously presented) An organic light emitting device comprising an anode and a cathode, and an emissive layer between the anode and cathode, the device including a hole-

blocking layer between the emissive layer and the cathode comprising a binaphthyl compound of the formula:

wherein each Ar<sup>1</sup> and Ar<sup>2</sup> is independently a substituted or non-substituted polycyclic aromatic hydrocarbon or a substituted or non-substituted aromatic heterocycle, each X<sup>1</sup> and X<sup>2</sup> is independently a substituted or non-substituted aromatic hydrocarbon, each n<sup>1</sup> and n<sup>2</sup> is independently 0 or 1, and wherein the compound's binaphthyl framework can be independently substituted at any position except those occupied by (X<sup>1</sup>)<sub>n<sup>1</sup></sub>Ar<sup>1</sup> and (X<sup>2</sup>)<sub>n<sup>2</sup></sub>Ar<sup>2</sup>.

Claim 14 (previously presented) An organic light emitting device comprising an anode and a cathode, and an emissive layer between the anode and cathode, the device including a hole-blocking layer between the emissive layer and the cathode comprising a binaphthyl compound of the formula:

wherein each Ar<sup>1</sup> and Ar<sup>2</sup> is independently a substituted or non-substituted polycyclic aromatic hydrocarbon or a substituted or non-substituted aromatic heterocycle, each X<sup>1</sup> and X<sup>2</sup> is independently a substituted or non-substituted aromatic hydrocarbon, each n<sup>1</sup> and n<sup>2</sup> is independently 0 or 1, each R<sup>1</sup> and R<sup>2</sup> is independently a hydroxyl group, a substituted or non-substituted alkyl group, or a substituted or non-substituted alkoxy group, wherein R<sup>1</sup> and R<sup>2</sup> can

Appl. No. 10/759,505  
 Amdt dated April 26, 2007  
 Reply to Office Action of October 30, 2006  
 Att. Docket No.: 1279-400C1

Filing date: January 16, 2004

 Examiner: Camie S. Thompson  
 Art Unit: 1774

be bound to each other to form a ring structure wherein the ring structure can have substituent groups, and wherein the compound's binaphthyl framework can be independently substituted by a halogen, a hydroxyl group, or a substituted or non-substituted alkyl, alkenyl, alkoxy or alkoxycarbonyl group at any position except those occupied by  $(X^1)_{n^1}Ar^1$ ,  $(X^2)_{n^2}Ar^2$ ,  $R^1$  and  $R^2$ .

Claim 15 (previously presented) The organic light emitting device of claim 14 in which the hole-blocking layer between the emissive layer and the cathode comprises a compound of the formula:

Claims 16 and 17 (canceled)

Claim 18 (previously presented) A binaphthyl compound of the formula:

wherein each  $Ar^1$  and  $Ar^2$  is independently a three, four or five-condensed aromatic ring, each  $X^1$  and  $X^2$  is independently a substituted or non-substituted aromatic hydrocarbon, each  $n^1$  and  $n^2$  is independently 0 or 1, and wherein the compound's binaphthyl framework can be independently substituted at any position except those occupied by  $(X^1)_{n^1}Ar^1$  and  $(X^2)_{n^2}Ar^2$ .

Appl. No. 10/759,505  
 Amdt dated April 26, 2007  
 Reply to Office Action of October 30, 2006  
 Att. Docket No.: 1279-400C1

Filing date: January 16, 2004  
 Applicant Name: Bazan et al.  
 Examiner: Camie S. Thompson  
 Art Unit: 1774

Claim 19 (previously presented) An organic light emitting device having an anode and cathode and an emissive layer between the anode and cathode, the emissive layer comprising:  
 a binaphthyl compound of the formula:

wherein each Ar<sup>1</sup> and Ar<sup>2</sup> is independently a three, four or five-condensed aromatic ring, each X<sup>1</sup> and X<sup>2</sup> is independently a substituted or non-substituted aromatic hydrocarbon, each n<sup>1</sup> and n<sup>2</sup> is independently 0 or 1, and wherein the compound's binaphthyl framework can be independently substituted at any position except those occupied by (X<sup>1</sup>)<sub>n<sup>1</sup></sub>Ar<sup>1</sup> and (X<sup>2</sup>)<sub>n<sup>2</sup></sub>Ar<sup>2</sup>; and fac-tris(2-phenylpyridine) iridium(III) as a phosphorescent dye dopant.

Claim 20. (new) A binaphthyl compound of the formula

Appl. No. 10/759,505  
Amdt dated April 26, 2007  
Reply to Office Action of October 30, 2006  
Att. Docket No.: 1279-400C1

Filing date: January 16, 2004  
Applicant Name: Bazan et al.  
Examiner: Camie S. Thompson  
Art Unit: 1774

Claim 21. (new) A binaphthyl compound of the formula

Claim 22. (new) The organic light emitting device of claim 14 in which the hole-blocking layer between the emissive layer and the cathode comprises a compound of the formula:
